

# Programme of Study: 2020-21

Department: ICT and Computer Science

## KS3 ICT Curriculum Intent

**Our ICT KS3 curriculum is designed to develop confident, digital citizens who have an enthusiasm for computational thinking and problem solving. The curriculum is designed to familiarise students with the Google Environment and give them opportunities to use a variety of programs for different tasks, thereby increasing their digital literacy cultural capital. They will experience a range of programming languages in which to demonstrate their creativity in analysing and solving problems, in an environment of supportive inclusion. They will recognise that the software and self-management skills learned in their ICT lessons can be transferred to other subjects. This will empower them to use their computational skills across a wide ranging curriculum - to enhance their learning, their confidence and their resilience as digital citizens of the 21st century.**

On entering EPS in Year 7 students learn how to login to the school network, recognising the importance of secure passwords and how the Google environment works. They develop web pages using HTML programming language and progress to using web authoring software to create several linked pages about e-safety. Students advance through understanding computer hardware, identifying input and output devices and learning about binary. Students will develop skills in spreadsheet modelling and use this knowledge when completing flowcharts. They will finish the year using logo (turtle) programming to create shapes and use loops. This takes them through a core skills development of sequencing, selection and iteration - the 3 core concepts underpinning computer science.

In year 8 students develop further digital literacy skills through using graphics and publishing software to communicate information . They are introduced to database software and learn how to query the database for key information using field names. Their programming experience will continue through the use of Small Basic and an introduction to Python. They will investigate computer networks and use of the World Wide Web. This gives them a good foundation for their future years in Discovery. Students will be able to confidently use the computer system that EP run and be aware of the functionality of a range of software that we use on the system. They will have a growing understanding of the 3 core programming concepts from Year 7 in relation to sequencing, iteration and selection. The overarching development and cohesion of their logical thinking will enable them to apply their knowledge and digital literacy across a range of curriculum subjects.

**KS3 ICT Programme of Study:**

	<b>Term 1</b>	<b>Term 2</b>	<b>Term 3</b>	<b>Term 4</b>	<b>Term 5</b>	<b>Term 6</b>
<b>Year 7</b>	<b>Intro &amp; Computers</b>	<b>HTML</b>	<b>iDEA Awards</b>	<b>Cybersecurity</b>	<b>Logo</b>	<b>E-Safety - AUP DTP</b>
<i>Students learn how to:</i>	<p>Login to network and google environment, intro to google classroom, sharing documents, emailing staff</p> <p>Input &amp; output devices, Inside the computer - knowledge of hardware - motherboard, Secondary storage, binary-denary, binary-ASCII,</p>	<p>Use HTML to create a web page showing text, colour and images</p> <p>Linking multiple pages</p> <p>Adding content about viruses</p>	<p>Badges to complete during lockdown: E-Safety &amp; Online Etiquette Safe Online Digital Ethics Cyber Security Social Media Ethics</p> <p>Growth Mindset Big Data Problem Solving Virtual Reality GIF Making Colours</p> <p>User Experience Working and Learning from Home Digital Careers</p>	<p>Explain the difference between data &amp; information, Identify what happens to data that is entered online</p> <p>Explain need for the DPA</p> <p>Recognise how human errors pose security risks to data</p> <p>Define hacking in context of cybersecurity</p> <p>Explain need for Computer Misuse Act (1990)</p> <p>List the common malware threats</p>	<p>Complete flowchart, create shapes using simple logo commands, use of repeat commands, procedures, sequencing,</p>	<p>Use of multiple tools in Publisher to create Acceptable Use Policy poster for EP school - MasterPage, guidelines, inserting images, text boxes, autoflow, shapes, colours,</p>
<i>Assessment</i>		<b>Online test: HTML</b>				<b>EOY online test: Inside computers,, E-safety, Logo, Cyber Security</b>

Year 8	Networks	Top Trumps - Database	Cybersecurity		Logo	Scratch
<i>Students learn how to:</i>	Advantages & disadvantages of networks, Types of networks Understanding LAN & WAN Difference between internet and WWW, Use of packet switching	Create Top Trumps database Create Top Trumps cards in Publisher Create input form in Access, creating records, editing records, adding/deleting field names, assigning datatypes, queries - single/multiple field, reports,	Explain the difference between data & information, Identify what happens to data that is entered online Explain need for the DPA Recognise how human errors pose security risks to data Define hacking in context of cybersecurity Explain need for Computer Misuse Act (1990) List the common malware threats	Compare security threats against their probability and their potential impact to organisations Explain how networks can be protected from common security threats Identify the most effective methods to prevent cyberattacks	Complete flowchart, create shapes using simple logo commands, use of repeat commands, procedures, sequencing,	Understand basic block commands, Make a 'guess the number' game, use of sequencing, repetition (looping), selection - if commands, interface - clicking objects to broadcast commands,
<i>Assessment</i>		<b>Term 1 Test: Online test:</b> Networks				<b>EOY online test:</b> Scratch, logo, Database assessment/e-safety

## ICT/Computing Pathways in Year 9-11

### OCR Cambridge Nationals in Creative iMedia Programme of Study

This course equips students with the wide range of knowledge and skills needed to work in the creative digital media sector. They start at pre-production and develop their skills through practical assignments as they create final multimedia products. Students will need to complete 4 units including units R081 Pre-production skills (externally assessed), R082 Creating digital Graphics, R085 Creating a Multipage Website and R087 Creating an Interactive Multimedia Product. These three units are moderated by OCR. Unit and qualification results are awarded on a 7 grade scale with: Pass, Merit and Distinction at both Levels 1 and 2, and with a new grading of Distinction\* at Level 2 to inspire students to achieve more. Students' performance on the units will determine their grade and level.

**By the end of KS4, students must be able to:**

#### **I-Media:**

- Understand pre-production skills used in the creative and digital media sector.
- Develop their understanding of the client brief, time frames, deadlines and preparation techniques that form part of the planning and creation process.
- Acquire the underpinning knowledge and skills needed to create digital media products and gain an understanding of their application.
- Understand the purpose, content and uses of a range of pre-production techniques.
- Apply knowledge and understanding gained in the compulsory units to help develop their skills further during the completion of optional units

	<b>Term 1</b>	<b>Term 2</b>	<b>Term 3</b>	<b>Term 4</b>	<b>Term 5</b>	<b>Term 6</b>
<b>Year 9</b>						
<i>Students learn how to:</i>	Introduction to Pre-production documents and their uses R081 Moodboards, mindmaps, Audience, client requirements, file formats, scripts, storyboards, visualisations,	Design and create a digital graphic using GIMP2 & File Types as applicable to graphics, image manipulation	Design and create a multipage website.	Design and create a multimedia product	Design and create a multimedia product	Revision of pre-production planning documents

	target audience, legislation, planning,

## GCSE Computer Science

Our Year 9 Foundation Year provides an introduction to programming through Python. It introduces networks and how computer hardware works. Background information on databases spreadsheets and websites is explored which gives students the basic building blocks for starting their GCSE course in Year 10. Computer Science is engaging and practical, encouraging creativity and problem solving. It encourages students to develop their understanding and application of the core concepts in computer science. Students also analyse problems in computational terms and devise creative solutions by designing, writing, testing and evaluating programs. Students are assessed through 2 external examinations and an internal Non Examined Assessment in Year 11.

**By the end of KS4, students must be able to:**

**Computer Science: OCR GCSE 9-1 (Years 9-11):**

- Have knowledge and understanding of the main computer components including: the central processing unit (CPU), computer memory and storage, wired and wireless networks, network topologies, system security and system software.
- They will also understand ethical, legal, cultural and environmental concerns associated with computer science
- Apply knowledge and understanding gained in component 01.
- They develop skills and understanding in computational thinking: algorithms, programming techniques, producing robust programs, computational logic, translators and data representation. The skills and knowledge developed within this component will support the learner when completing the Programming Project.

- Develop their practical ability in the skills developed in components 01 and 02. They will have the opportunity to define success criteria from a given problem, and then create suitable algorithms to achieve the success criteria.
- Code their solutions in a suitable programming language, and check its functionality using a suitable and documented test plan.
- Evaluate the success of their solution and reflect on potential developments for the future.

Pearson Edexcel BTEC Extended Certificate NQF in IT

This qualification is designed for learners who are interested in an introduction to the study of creating IT systems to manage and share information, alongside other fields of study, with a view to progressing to a wide range of higher education courses, not necessarily in IT. The BTEC Level 3 National Extended Certificate is designed as a one-year, full-time course or as part of a two-year, full-time programme with opportunity for inclusion of other BTEC National Level 3 courses or A levels. It consists of three mandatory and two optional units. Unit 1 is externally set and examined (synoptic unit) Unit 2 is externally set and examined Unit 3 is internally set and assessed. In addition, one optional unit will be delivered and assessed.
